Azure Lab Services & Dev Test Labs

Cloud Solutions for Higher Education

What is Azure Lab Services?

Azure Lab Services is a cloud service that allows instructors to create and manage virtual labs for various scenarios, such as classes, training, hackathons, and experiments. With Azure Lab Services, teachers can focus on preparing the lab content and experience for students, while Azure handles the infrastructure provisioning and scaling. Universities can also control the lab budget and usage by setting up schedules, quotas, and policies.

What is Azure DevTest Labs?

Azure DevTest Labs allows instructors to easily create, use, and manage virtual machines and environments in Azure for development, testing, and training purposes. Instructors can quickly provision and configure the resources needed for scenarios, such as web apps, databases, or mobile apps. DevTest Labs differ from Lab Services as that lab owners can also set up private virtual networks and provision environments within CI/CD tools.

Common Use Cases

Researchers
can run experiments and test their ideas on a large scale, using the latest technologies and tools available on Azure

Innovators
can create prototypes for new products or services and showcase them to potential external stakeholders.

Collaborators
can work together on common projects or challenges and share their knowledge and expertise with each other.

Benefits of Azure Lab Services & DevTest Labs

Cost optimisation and control

Embedded Security

Flexible and scalable lab environment

Simplified lab creation and management

Enhanced student experience and outcomes
